

Zucchini - Black Beauty

Summer squash plants are fast growing and easy to care for. They grow large leaves and bright yellow flowers, which are either male or female, and require pollination by insect or hand. Both the flowers and fruits are edible.

The Black Beauty Zucchini produces a dark green-skinned fruit with a creamy white flesh that is best eaten when young.

Require high levels of water and nutrients to support its quick growth. When the blooms begin to form, add compost and fertilise. Continue fertilising fortnightly throughout the growing season.
